Profile

Front-end developer with a foundation in technology operations and structured problem-solving, now focused on building responsive, accessible, and user-friendly web experiences. Comfortable working across HTML, CSS, and JavaScript to turn ideas into clean, functional interfaces, with growing interest in full-stack development and secure systems practices.

Experience

Tech Operations Support Intern

UAC FOODS LTD — Ojota

July 2025 – September 2025

- Monitored internal systems to identify, report, and troubleshoot operational issues, escalating complex cases when necessary.
- Responded to user support tickets in a timely, structured manner and maintained accurate documentation of incidents and resolutions.
- Communicated with users to clarify technical concerns and ensure issue resolution.

Education

B.Sc. Computer Science

Olabisi Onabanjo University

January 2024 – June 2027

Skills

Frontend: HTML, CSS, JavaScript, Responsive Web Design

Programming: Python

Other: System monitoring, technical troubleshooting, structured documentation, ticket handling

Projects

Wallet Snipper

- Built a personal finance tracker for managing income and expenses, with dynamic transaction handling and real-time dashboard updates.
- Implemented state management in the DOM, event handling, and form validation using vanilla JavaScript.

Weather

- Built an interactive weather app that fetches and displays real-time forecasts through API integration.
- Implemented dynamic DOM updates and error handling for invalid or failed requests.

Kupee

- Designed and built a responsive multi-section landing page for a coffee brand, covering hero, menu, testimonials, and gallery sections.
- Applied semantic markup and mobile-first responsive design principles.

Interests & Development

Cybersecurity: Ethical hacking, Red/Blue team concepts, Purple Team methodology

AI: Model training workflows, data annotation, evaluation logic

Software Engineering: Deepening backend knowledge and expanding full-stack capability
